TYPHOON® CHASSIS

ENGINEERED FOR DURABILITY. PROVEN IN THE FIELD.

The E-ONE Typhoon cab is designed and built with a structural cage design to provide maximum protection and comfort for firefighters. Structural extrusions including sub-frames, a full flange wishbone frame rail, center uprights, and crossbeam extrusions are engineered for optimum performance. Horizontal and vertical supports handle severe vertical loads which can occur in accidents. The exterior of the cab is made of 3/16" aluminum-alloy sheet for added strength, including the doors.

The Typhoon offers five cab lengths, multiple seating configurations, various internal and external storage options, lighting packages and three vista roof heights. The interior features an ergonomic design with easy to reach controls and a severe duty engine cover with beveled upper sides for additional room.
